Objective

The objective of this workshop is to learn to use Angular Material

Setup

a. Create a branch from day 32.
b. Add Angular Material to the project

Workshop

Task 1

Convert the views from plain HTML to use Angular Material components. Note, this should not affect your components, only the view.

Task 2

Generate a PWA application manifest for the project and integrate into the Angular application.

Task 3

Once you are satisfied with your 'Materialized' application, merge the branch into `main` (or `master`).

Task 4

Deploy the application to Vercel.
